EDUCATION

Polytechnique Montreal

Bachelor's degree in Software Engineering, Minor in AI, GPA 3.56

Montreal, QC

Aug. 2022 – May 2026

EXPERIENCE

Software Developer

May 2024 – Present

Okapya Software Solutions

Laval, QC

- Engineered a fault-tolerant hourly **cron job** in **Node.js** that sequentially processes thousands of **Shopify** events and transactions into **HubSpot CRM** with **100%** data consistency via idempotent upserts, skipping execution if the previous job is still running
- Delivered full-stack features for a **React** and **Node.js SaaS** application including reusable modal components for dirty-form handling, a complete template management board, and global state distribution via **React Context**
- Elevated application reliability by building the testing infrastructure from scratch and implementing **350+** unit and integration tests with **Jest**, achieving **95%+** coverage and drastically reducing production regressions

PROJECTS

Insurance Recommendation Portal — Sollio Cooperative Group & Mitco7

Jan. 2026 – May 2026

- Architected **DevSecOps** pipelines with **GitLab CI/CD**, automated **SAST** security audits, and **pre-commit hooks**, ensuring **zero** vulnerability regressions across the full-stack codebase throughout the release cycle
- Built a hybrid AI pipeline combining **PdfPig** for PDF data extraction and the **Gemini API** for intelligent claim categorization, processing sensitive insurance documents with **100%** local data privacy

Kazoo, Quizzing platform

Jan. 2025 – May 2025

- Architected a real-time avatar system supporting local uploads, live camera capture, and canvas drawings using **Flutter** and **Node.js**, ensuring seamless cross-device synchronization via **Firebase**
- Led the full migration of a legacy **Angular** web application to **Flutter**, delivering cross-platform mobile compatibility while maintaining **100%** feature parity across **10+** core modules

Scalable Cloud Database Cluster

December 2025

- Self-taught and applied **Terraform** to fully automate **AWS EC2** cluster provisioning, deploying a distributed **MySQL** master-slave environment in under **2 minutes** from scratch
- Engineered a **Python** middleware proxy implementing three routing strategies — direct (master), random (slave), and latency-based (lowest-latency slave) — for intelligent read/write request distribution across database nodes

AskTheSpire, RAG Question-Answering Assistant

May 2026

- Built an end-to-end **RAG** pipeline in **Python** that scrapes, chunks, and embeds a **Slay the Spire 2** wiki corpus into a local **Chroma** vector store, then generates cited answers via the **Claude API**
- Established a **RAGAS** evaluation baseline over a **33-question** test set, achieving **0.87 faithfulness** (above the **0.85** target) and iterating on prompt and retrieval strategy driven by measurable metrics

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C#, C++, Go, Dart, Bash, HTML/CSS

Frontend & Mobile: React, Angular, Flutter

Backend & APIs: Node.js, Express, NestJS, ASP.NET, FastAPI, Spring Boot, GraphQL, REST APIs

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Kubernetes, Terraform, GitLab CI/CD, GitHub Actions

Databases: PostgreSQL, MongoDB, Firebase

Tools & Methodologies: Git/GitHub, Jira, Confluence, Agile, Kanban, DevSecOps

Spoken Languages: English (native), French (native), Vietnamese (intermediate)

CERTIFICATIONS

- AWS Cloud Practitioner Essentials
